Quarterly Fact Sheet | Institutional Class: GTRFX | Investor Class: GTRNX

ABOUT THE FUND

OVERVIEW

- Allocation strategy that invests in underlying Gotham mutual funds
- Underlying fund allocations will be rebalanced according to our assessment of market conditions to manage both net exposure and beta

INVESTMENT OBJECTIVE AND STRATEGY

- Seeks long-term capital appreciation by investing in underlying Gotham mutual funds and in doing so aims to outperform the investment returns of top ranked university endowments over a full market cycle, which includes bull (rising) and bear (falling) markets

FOUR POTENTIAL SOURCES OF RETURN

- Long Equity Exposure:** Investment in stocks that are ranked and weighted based on Gotham's fundamental valuation framework
- Long/Short Exposure:** Active long/short overlay, which we expect to be uncorrelated or negatively correlated with the U.S. equity market, potentially resulting in attractive upside and downside capture ratios over the long term
- Active Allocation Management:** Co-CIOs actively monitor allocations to underlying funds and opportunistically update based on market valuation levels
- Active Net Exposure Management:** Actively managed by Co-CIOs based on underlying market valuation levels

COMPETITIVE ADVANTAGES

Experienced Management

The fund is managed by Gotham Asset Management led by Joel Greenblatt and Robert Goldstein, who have over 50 years of combined hedge fund management experience.

Proprietary Research Methodology

Gotham follows a systematic process of researching and valuing companies, rebalancing positions daily to take advantage of changing stock prices and fundamental information.

Portfolio Diversification and Risk Management

Allocation to multiple underlying funds can allow for a less volatile return profile relative to a single fund investment.

Tax Goal⁴

We aim to achieve long term capital gains treatment for the vast majority of any realized gains.

² Morningstar rating and percentile rankings are for GTRFX.

³ Source: Morningstar. Returns for GTRNX reflect extended performance and are an estimate based on the performance of the fund's oldest share class, GTRFX, adjusted for fees and expenses.

⁴ A preference for long-term gains is an objective established and followed by Gotham, is not formal policy of the fund, and is subject to change at any time.

The performance data quoted represents past performance. Past performance is no guarantee of future results. Investment return and principal value will fluctuate so that an investor's shares upon redemption may be worth more or less than their original cost. The performance quoted does not reflect a 1% redemption fee on shares redeemed within 30 days of purchase. Returns would have been lower if certain expenses had not been reduced or reimbursed. Current performance may be lower or higher than the performance quoted here. The Morningstar Rating™ ("star rating") applies to managed products (funds, variable subaccounts, and separate accounts) at least three years old. Exchange-traded and open-end mutual funds are combined into a single population. The rating is based on a Morningstar Risk-Adjusted Return, measuring variation in a managed product's monthly excess performance, placing more emphasis on downward variations and consistent performance. The top 10% of products in each category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars, and the bottom 10% receive 1 star. The Overall Morningstar Rating is a weighted average of the three-, five-, and 10-year (if applicable) Morningstar Rating metrics. For a product with five, but less than ten, years of history the weights are: 60% five-year rating/40% three-year rating. For ten years of history the weights are: 50% 10-year rating/30% five-year rating/20% three-year rating. The three-year rating has the greatest impact because it is included in all three rating periods. In the Long/Short Equity category, GTRFX was rated 5 stars among 199 funds for the 3 year period ending 12/31/2018. © 2018 Morningstar, Inc. All Rights Reserved. INVESTMENT PROCESS

- Allocates amongst underlying Gotham mutual funds based on market conditions.
- The Co-CIOs and their team of equity analysts employ Gotham's proprietary analytical framework to evaluate stocks within the coverage universe on measures of absolute and relative value.
- Gotham's equity research and risk controls are used to select long and short stock portfolios from a diverse market capitalization universe.
- The long (short) portfolios are rebalanced daily to weight most heavily those stocks priced at the largest discount (premium) to Gotham's assessment of value.
- In general, as a company appears cheaper, its weight in the portfolios increase.
- Risk for the funds are managed by limiting concentration in any one company, industry or sector. In addition, gross and net exposures are managed daily to remain within carefully defined ranges.

IMPORTANT INFORMATION

*Portfolio snapshot and sector exposures are on a look-through basis and based on the exposures and characteristics of the underlying funds.

Mutual fund investing involves risks, including possible loss of principal. Short sales by a fund theoretically involve unlimited loss potential since the market price of securities sold short may continuously increase. The fund will use leverage to make additional investments which could result in greater losses than if the fund were not leveraged. It is anticipated the fund will frequently adjust the size of its long and short positions and thus may experience high portfolio turnover which may increase brokerage costs. The fund may invest in large, mid and small cap companies. Small and mid cap equity securities may be more volatile and less liquid than the securities of larger companies.

An investor should consider the investment objectives, risks, charges and expenses of the fund carefully before investing.
